CURRENT LIST of MEDICAL LITERATURE

Medical Library

Vol. 7

Sept. 15, 1944

No. 11

SUBJECT GROUPS ACCORDING TO JOURNALS

- | | |
|---------------------------------------|---------------------------------------|
| 1. Anatomy; Histology | 26. Infectious Diseases; Epidemiology |
| 2. Anthropology; Ethnology | 27. Medicine |
| 3. Archeology; Paleontology | 28. Metabolism |
| 4. Aviation Medicine | 29. Military and Naval Medicine |
| 5. Bacteriology; Parasitology | 30. Miscellaneous |
| 6. Biology; Embryology | 31. Neurology; Psychiatry |
| 7. Bone; Joint; Extremitities; Muscle | 32. Nursing |
| 8. Cancerology | 33. Ophthalmology |
| 9. Cardiovascular System | 34. Otorhinolaryngology; Phoniatry |
| 10. Chemistry; Physics | 35. Pathology |
| 11. Dentistry; Stomatology | 36. Pediatrics; Child Welfare |
| 12. Dermatology | 37. Pharmacology; Pharmacy |
| 13. Diagnosis; Clinical Methods | 38. Physiology |
| 14. Dietetics; Foods; Nutrition | 39. Psychology; Mental Hygiene |
| 15. Digestive System | 40. Public Health; Sanitation |
| 16. Endocrinology | 41. Radiology; Phototherapy |
| 17. Forensic Medicine; Toxicology | 42. Respiratory System |
| 18. Genetics; Eugenics | 43. Surgery; Traumatology |
| 19. Gynecology; Obstetrics | 44. Therapeutics |
| 20. Hematology | 45. Tropical Medicine |
| 21. History; Biography; Bibliography | 46. Tuberculosis |
| 22. Homeopathy; Osteopathy, etc. | 47. Urology |
| 23. Hospitals | 48. Venereal Diseases; Sexology |
| 24. Immunology; Serology | 49. Veterinary Medicine |
| 25. Industrial Hygiene; Sociology | 50. Zoology |

Printed in the U.S.A.

MICROFILMS AS RIVALS OF REPRINTS

The practice of collecting reprints is followed by many of those engaged in research. Friends, acquaintances, and persons publishing in the same field usually exchange their reprints. Others make a habit of requesting reprints of papers concerned with the problems upon which they are engaged. In general, an author is flattered by being asked for a reprint of one of his papers. He is usually supplied without cost with a certain number and sends them out promptly to his friends and those who request them. Recently, however, the journals are beginning to charge for reprints and a person contributing several papers per year may find that his bill for reprints, envelopes and postage amounts to an appreciable sum. Several of the larger research institutions and commercial firms secure sufficient numbers of reprints of the papers written by members of their staff to send them out in fairly large quantities, and undoubtedly spend considerable sums in this way. Recently one of the larger Foundations has been sending to the scientists in the Armed Forces located in widely scattered places, reprints of important papers selected for the purpose by committees of specialists. This undertaking has attained very large proportions.

The distribution of the original publications of research in the form of reprints certainly plays an important part in extending one's knowledge of the advances being made in the various fields of science. It is rare, however, that a person can obtain in this manner more than a small proportion of the widely scattered papers pertaining to the specific problem upon which he is engaged. These are published in many different countries and, in a large majority of cases, cannot be obtained as reprints.

Now, thanks to microfilm copying, the gaps in collections of reprints on a particular subject can be conveniently and completely filled.

From an economical point of view, the more wide-spread use of microfilms has the advantage that each one selects exactly the papers he wants instead of receiving many in which he may have no or very little interest. These latter are often a source of embarrassment since they may be written by his friends or for some other reason can be disposed of only with regret. They are usually not desired by libraries since the cataloging and conserving of such a variety of separate items becomes a burden. One system of disposal is to place them on a free table and

allow those who come into the library to select the ones in which they may be interested. This haphazard system of distribution has the effect of causing reprints to be wasted by falling largely into the hands of those who have no immediate or even future need of them. Microfilms on the other hand are made at the time and only on the request of those who have a pressing need of them. They are available not only of the current publications, but of the older ones of which the authors have no more copies for disposal or have long since ceased their activities.

Microfilms lend themselves easily to supplementing reprint collections. They can be attached to sheets of paper or placed in envelopes of a size similar to reprints and thus filed together with them. A simple monocular viewer permits their convenient reading and takes up no more space than a small magnifying glass. The Army Medical Library now supplies microfilm copies as an extension of the service it renders to the advancement of medicine. It is hoped that this policy will gradually be adopted by many other libraries and this new helpmate to research be employed on an ever-increasing scale.

A. Seidell
